The **FOX** model of the latest generation has been developed and manufactured with the best engineering and production techniques.

The registered design, ergonomic and functional, in combination with the features of high-performance materials, contribute to the accomplishment of an essential and efficient product for the execution of accurate and profitable works.

Practical, light and easy to clean, it is made of the best shock-proof thermoplastic materials.

The adapter, suitable for the assembly of one-component polyurethane screw cylinders, is harmoniously built in the gun body. This model is complete with the "Safety-System" patented flow regulator preventing it from accidentally coming out of its own seat.

Special short metal barrel with universal fittings for a wide range of extensions

Built-in universal adapter, easy to clean

Dosage regulator of the dispensed product with "Safety-System"

Control lever having a progressive action

Non-slip ergonomic handgrip

MODEL MULTIFOX

- ultra light, weighing only gr.175
- ergonomic and registered design
- easy and quick cleaning
- wholly made of easy-to-clean, anti-adhesive and high-performance thermoplastic material
- easy-to-clean built-in adapter
- ground stainless steel needle
- disassemble-proof lever and regulator made of plastics
- self-balancing and long-life special rod seal
- Short metal barrel equipped with universal fittings for a wide range of disposable extensions
- high-quality materials
- rod gasket life-time (wear): > 100,000 cycles

Packaging			
box	61x51x76 cm	60 p.	13,6 Kg.
blister	40x60x43 cm	28 p.	8 Kg.

Rubber protection plug

Replaceable nozzle

Wide range of extensions

Wide range of colours

RIGO NEW MULTIFOX: *the perfect foam gun for odd foaming jobs*

200 mm or longer straws : normal foam gun use but with flexible trim to length extensions

Conical needle type nozzle : very small crevices and tight places where you need a very thin point but not a lot of foam, add the 150 mm long extension and get a longer needle point that can be bent in every direction

Spatula type, screw in place nozzle: useful to apply glue or flat and wide strips of foam

Pointed, screw in place nozzle: when you need a strong conical tip that can be trimmed at the required length to adjust foam strip width or when a strong piercing point is needed to penetrate past Styrofoam panels to fill with foam the gaps behind. The screw in place connection assures that the plastic tip will stay tight on the gun even in the roughest working conditions

Y shape 2 ways nozzle: very useful to apply two strips of foam at different widths (the Y arms can be trimmed at various widths) in one single passage

Very compact and strong gun: designed to work in tight places or when a normal length barrel gun + plastic extension/disposable tip becomes far too awkward.
