

CART TURBINE Rigo[®]: task-driven versatility!

Choosing an ally for our work has never been easier: thanks to the CT9-I and CT18-E models, Rigo[®]'s CART TURBINES seamlessly meet the various needs of the industry and construction sectors, with task-driven versatility for trade users in this sector.

Professionals in the field are familiar with it.

Those who love their work – and who, above all, love certainty of results – use it already. We are talking about Rigo[®]'s CART TURBINA HVLP, a painting tool developed by our company and constantly updated based on the characteristics of the paint products used, the intended uses and the needs of painters.

Why?

Because these professionals provide the inspiration for Rigo[®]'s new CART TURBINA!

"CART TURBINA is a piece of equipment that brings with it extreme

versatility. When properly used, it becomes the perfect resource to meet all painting needs", explains Ricardo Rigolio, president of Rigo[®] -.

"Firstly, the dual technology, low and high pressure, allows use on medium and large surfaces but also on smaller surfaces or objects.

In addition, the ACT dispenser is essential for independently adjusting air and product in order to find the best mix of finish and yield and apply all kinds of paints and varnishes, in the carpentry, steelworking, construction and marine sectors.

The set-up of the machine and the variety of accessories do the rest, By 'the rest' I mean everything that is useful in daily work: convenience of transport, ease of maintenance, time and material savings, guaranteed results, and respect and sustainability in use for people and the environment".

Such a well thought-out piece of equipment would already mean all our problems are over... but at Rigo[®] we did some further thinking.

"We put ourselves in the painters' shoes and we thought that CART TURBINA would be even more valuable if we re-assessed its characteristics starting out from specific uses", says Vincenzo Cattaneo, the Rigo[®] general sales manager.

"So we opted for two solutions, CT9-I and CT18-E, the former dedicated to use in industry, the latter in construction.

CART TURBINA IN DETAIL

- with ACT dispenser and independent air/product adjustment for ideal mixes, yields and finishes
- reliable, durable, top performing, quality equipment. And finishes typical of HVLP low pressure work
- for optimal performance, with 1800-Watt TMR180E electronic TURBINE
- compressor (up to 4 bar) with adjustment/control manometer for all coatings (even the densest!)
- 7-mt tubes for paints, topcoats and water-based coating, enabling freedom of movement
- structurally compact and lightweight (weighs less than 30 kg)
- user-friendly flexible handle and large wheels – easy to handle up and down stairways etc.
- universal power sockets with safety switches, for accessories (e.g. drills, sanders, vacuum cleaners, mixers)

CT9-I, with its smaller tank, is certainly more suitable for painting jobs in steelwork, the marine sector and carpentry – sectors using less dense paints (therefore, less product needed).

Also, in the industrial sector, bi- or tri-component paints with limited pot-life are used, and the reduced tank size makes for more careful consumption.

Then we should factor in the sizes of the surfaces and objects to be painted, which are usually smaller than walls and floors. Lastly, we also considered cleaning operations, which are more delicate tasks due to the use of solvents.

CT18-E, dedicated to construction, is perfect for loading a large can of paint into the 18-litre tank. It saves time for seamless work and for preparation of the areas to be worked on".

CT18-E

reli, heading Rigo®'s communications and marketing activities. "The demonstrators are the company's outreach, territory-wide.

Through them, our explanations of what our CTs can do become more understandable and shareable with other players in this sector.

Through CART TURBINA we can also probe new sectors and new areas of use, "After all, we are talking about Rigo®'s flagship product – the true synthesis of the great potentials of our models.

"Don't forget that our goals also include creating an industrial

sector culture! And CART TURBINA is our way forward!" ●

Basically, it's all about equipment and task-driven versatility...

"CART TURBINA is the perfect piece of equipment to create virtuous cycles in our industry," says Vincenzo Cattaneo.

"Designed for artisans, whose work it simplifies and optimizes, CART TURBINA is a great sales opportunity for distributors who, when they present it correctly, generate sales to – and benefits for – our end users.

It's also a great opportunity for Rigo® to offer a solution that works, that accredits it with the outlets which Rigo® supplies, and it boosts our good name.

And, for designers and manufacturers like us, it fully reflects the company's values and worth".

To attain this virtuous cycle, CT9-I and CT19-E must be appropriately presented... and in great detail...

"Of course, and that's why we are working hard to build up our team of demonstrators with a focus on the ability to present our CART TURBINA and convey Rigo®'s values," says Elisabetta Mo-
