

Cart Turbine:

a new, precious ally for those who paint

For seventy years the mission of Rigo® has been the study, design and construction of equipment and machinery to simplify and render more efficient the job of applying paint products. These tools have been studied with the skill and passion appreciated by operators in this sector because they become a precious ally of their professional activities.

Turbine Cart is the fruit of these many efforts.

With their usual enthusiasm and knowledge, we are further enlightened by Riccardo Rigolio and Vincenzo Cattaneo, respectively Managing Director and Sales Director of Rigo®.

What was the motive underlying creation of the new Turbine Cart?

Riccardo Rigolio- Turbine Cart has two important ancestors: JOLLY and POKER, two painting machines that met with great success in the Eighties.

With Turbine Cart we decided to re-launch these two machines renewed with our utmost technology and new construction techniques.

With Jolly and Poker Turbine Cart, Rigo® intends to reiterate its authority in the painting of medium and large surfaces thanks to two machines destined to become the

presents on the market **Cart Turbine Jolly and Poker**, two machines - one summary of all features that makes the equipment of excellence a winning ally in carrying out of your own work.

”

new standard reference for professional operators in this sector.

What has Turbine Cart got more?

Riccardo Rigolio- We are talking of a true and proper combination of the winning features of Rigo® equipment. Practically, Turbine Cart unites two systems for the application of paints which, although apparently in contrast, in this new machine find an ideal meeting point. In fact, the new Turbine Cart combines the inheritance of both JOLLY and POKER, incorporating all their features of robustness, reliability, long life and high per-

formance high-pressure painting, with the addition of top quality finishing and easy use attributed to low-pressure painting based on the HVLP system.

How is the new Turbine Cart made and how does it work?

Riccardo Rigolio- The new Rigo® Turbine Cart is provided with a stainless steel tank with a capacity of 9 and/or 18 litres according to the version. It has an easy opening-closing system and is of the latest generation for safety and duration. It is provided with a robust pressure compressor

and relative manometer to control the flow of paint through the feed pipes of various diameter for varnishes/enamels and water paints.

The special last-generation spray gun, of most recent design (air stop) allows independent air/product adjustment. It is completed with a powerful and suitable 1800W TMR180E Turbine, with electronic and remotely controlled adjustment, used to nebulise the product due for application using the HVLP system.

All the equipment is arranged on an original and practical trolley, in painted solid steel pipe, provided with a folding handle that makes

the machine easy to handle and store in a limited space. With its large wheels it can be easily pulled up and down steps with an overall empty weight of less than 30 kilograms.

Furthermore, a series of universal sockets with safety switches make use possible of the new Turbine Cart with the aid of auxiliary equipment, such as drills, grinders or paint mixers.

Finally, as for all other Rigo® machines, there are various versions and an almost infinite series of accessories and spare parts making it possible to adapt the configuration of the equipment to every specific requirement.

■ ■
Every single detail of the Cart Turbine has been thought to achieve the best operational performances with the more secure and easy to apply design solutions.

So, summing up, Turbine Cart represents a true and proper ally for operators having to paint or spray...

Riccardo Rigolio- Autonomy, multi-use, safety, functionality, time savings and optimised results: yes, you get all of these with Turbine Cart!

We think that a machine designed to satisfy operators' needs must guarantee an indispensable performance.

When we design new equipment, we put ourselves in the shoes of who is going to use it and we look for every solution, even the most banal, that could be fundamental when the equipment is in use.

For example, looking at Turbine Cart, the safety of the air adjustment valve which automatically restarts the compressor, or the ergonomics of the folding handle that saves space when the Turbine Cart equipment is loaded onto a vehicle.

But that's not all. Turbine Cart was designed to work in tandem with our TMR 180E Turbine thus guaranteeing maximum flexibility by itself or with our Cart system: practically, whoever needs to use the spray can choose a machine suitable for spaces of various sizes and more or less open, to optimise the use of tools.

Autonomy, versatility, safety, functionality, time saving and result optimisation: you have all this in **Cart Turbine!**

mercial objectives have you in mind for this new machine?

Vincenzo Cattaneo- At the moment we want to show our clients the exceptional performance of Turbine Cart and to do this we have organised some events in which we will, first of all, take care of informing and training our agents, and then our dealers. With Turbine Cart we are going to target a group of operators who constantly need new equipment that contributes to increasing their professionalism.

Turbine Cart goes in this direction.

More professionalism, a more simple job with better results: these are the elements required by the operators to whom we have proposed our machine.

Easy maintenance and transportation do the rest, making Turbine Cart a trusted tool in daily work.

We have organised a team of Rigo® testers who will try out Turbine Cart and provide us with a detailed assessment of its functions.

In some of our pilot sales points we will install Turbine Cart so it is visible to clients and we will provide information in the form of brochures, flyers, videos and photos, mail and news on our site and Facebook – allowing us to catch immediately every single potentiality! ■
